Solverah

Platform Architecture

Understanding People. Understanding Work. Enabling Better Decisions.

July 2026

Why Solverah Exists

Current tools answer useful questions. They rarely explain fit.

Today, career tools can answer:

- What jobs are available?
- What does the role pay?
- What skills are required?
- What do employees think?

But they often do not explain:

- Why one person thrives while another struggles.
- Why a “great company” may not be the right environment.
- Why the same manager can energize one person and drain another.

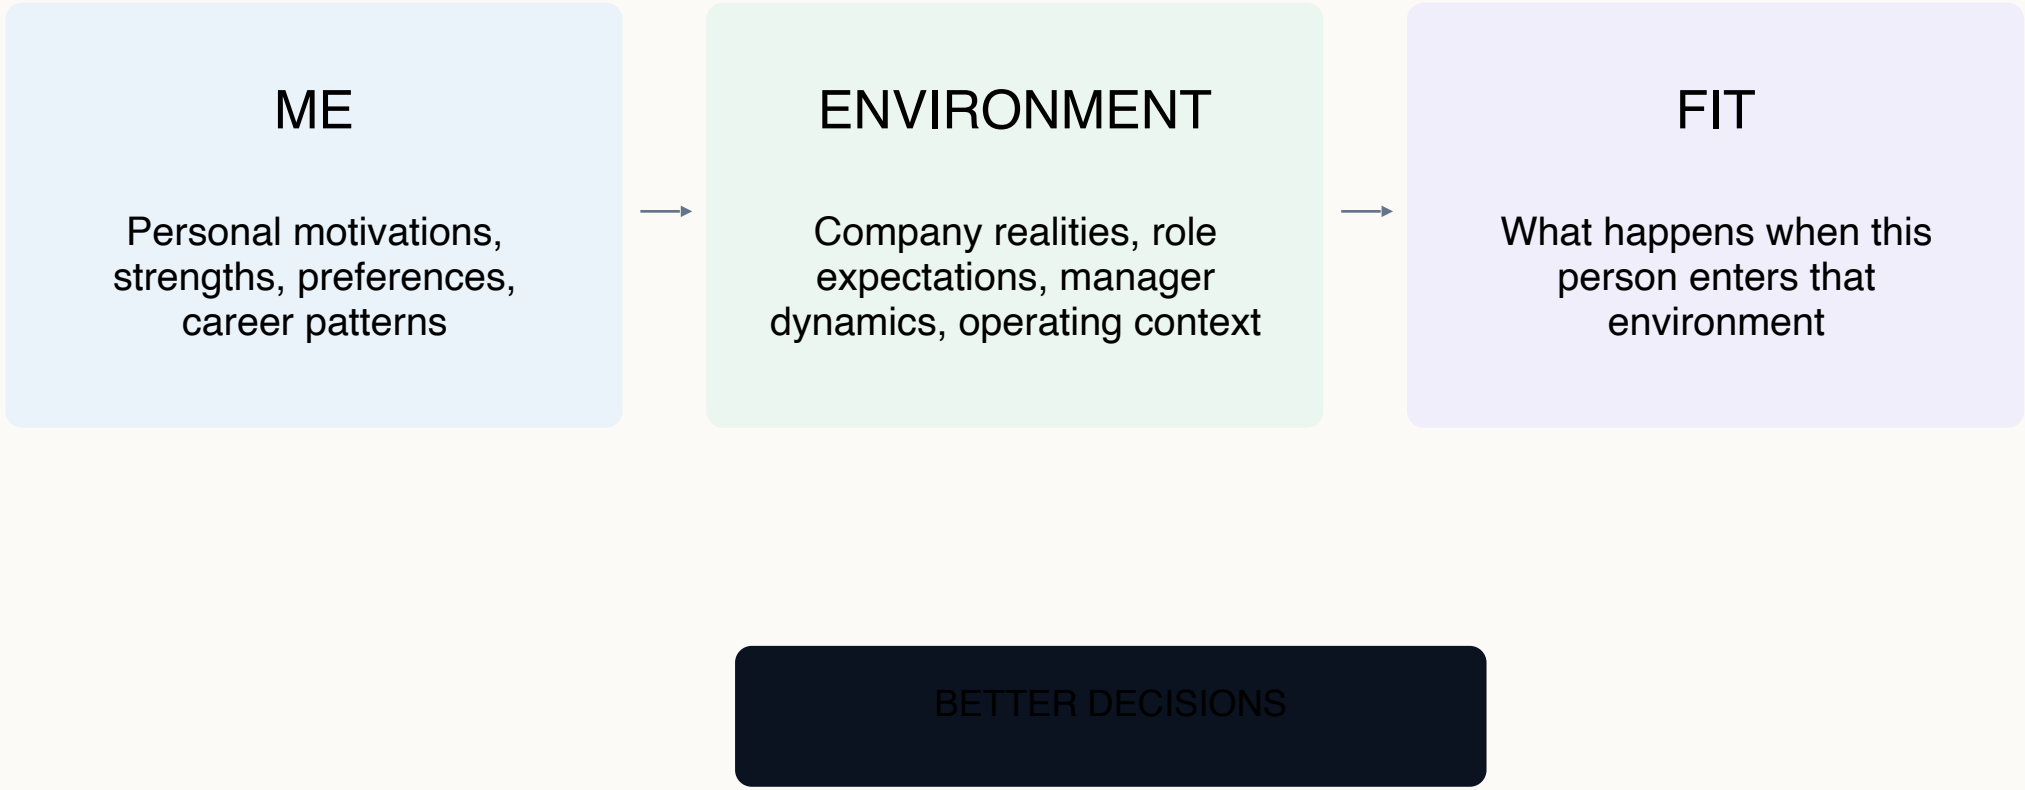

Solverah exists to solve that gap.

Better decisions require better understanding.

Not just understanding the person. Not just understanding the company.
Understanding the interaction between the two.

Three Layers of Understanding

Every Solverah product contributes to one or more layers.

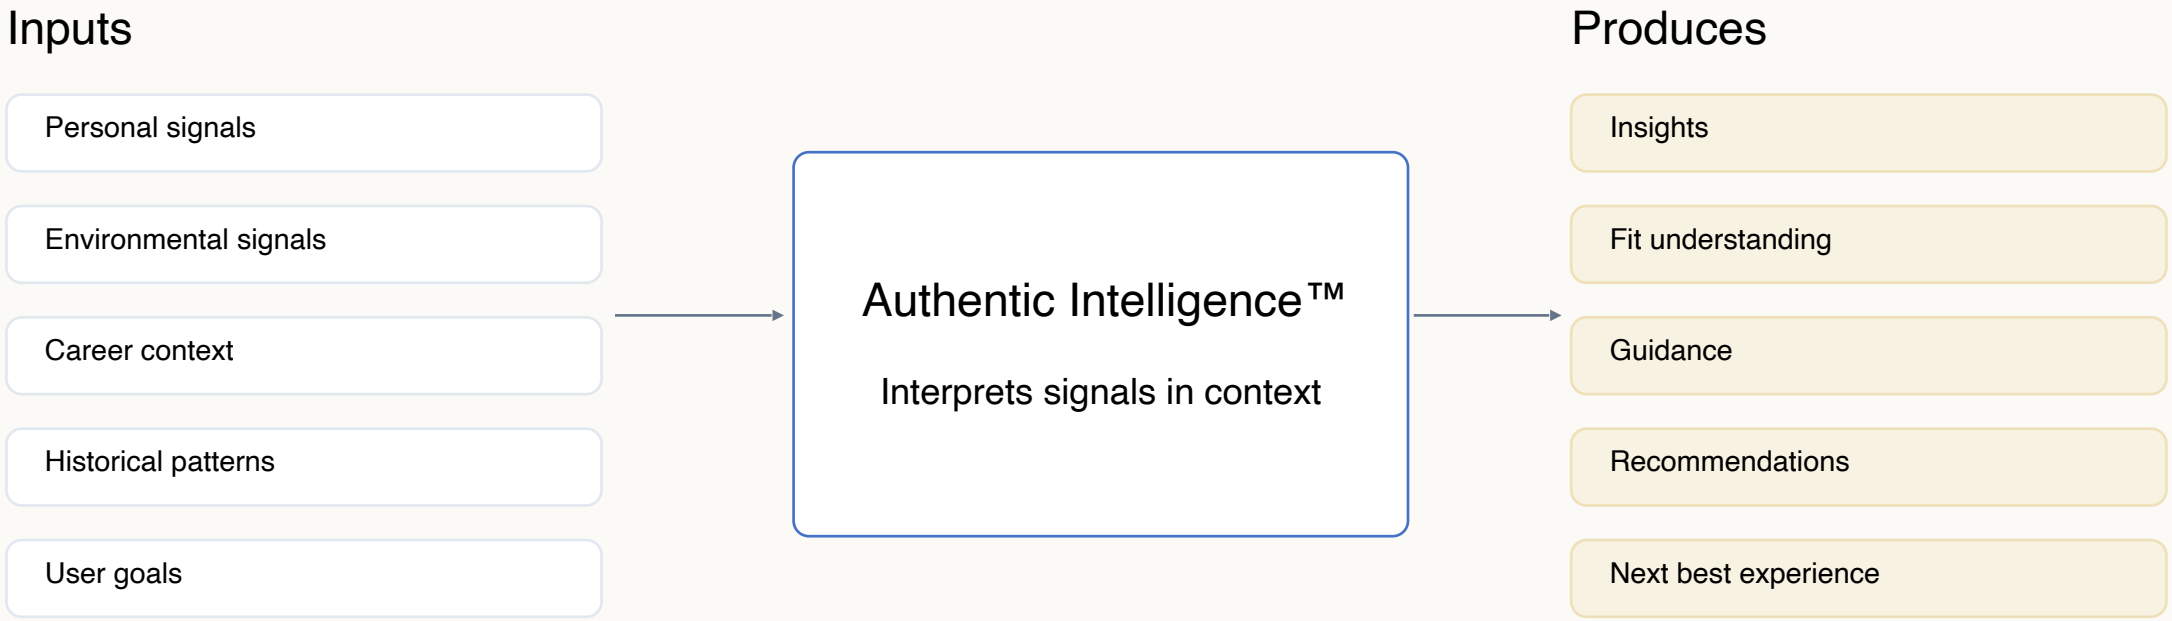

Platform Architecture

Two streams of understanding feed one reasoning layer.

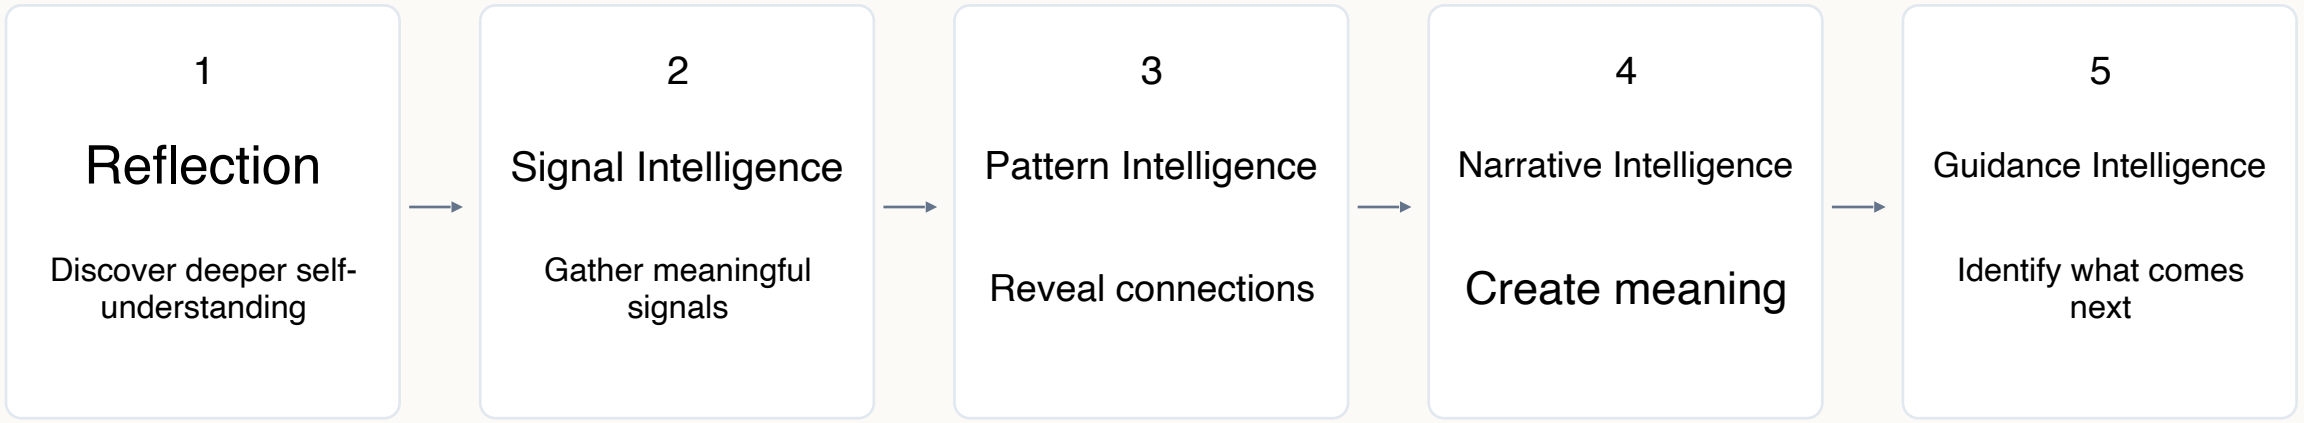

Authentic Intelligence™

The proprietary reasoning methodology behind Solverah.

The Solverah Decision Model

Capabilities that transform reflection into guidance.

Each capability has a different responsibility, but all serve the same outcome: better decisions through better understanding.

Component Format

Every product or capability should answer the same three questions.

Purpose

Why does it exist?

Captures

What signals or information does it collect?

Contributes

How does it make the platform smarter?

This creates a consistent architecture for current products and future capabilities.

Product Ecosystem

Products are applications of the same understanding engine.

Component	Purpose	Contribution
Reflection	Discover signals	Foundational personal understanding
Career Moments	Capture context	Situation-aware guidance
Work Pulse™	Detect change	Temporal signal updates
CompanyLens™	Understand environments	Environmental intelligence
ManagerMatch™	Understand leadership fit	Leadership compatibility signals
Understanding™	Preserve understanding	Dynamic intelligence layer
Decision Intelligence	Deliver guidance	Personalized next steps

Reflection + Career Moments

The front door to personal signals.

Reflection

Purpose

Help individuals articulate their current career situation and begin building self-understanding.

Captures

Goals, concerns, motivations, emotions, and initial self-reported signals.

Contributes

Foundational personal signals that initiate and enrich the Understanding™.

Career Moments

Purpose

Provide context around significant career events and transitions.

Captures

Life events, career stage, challenges, aspirations, urgency, and timing.

Contributes

Contextual signals that improve the relevance of guidance and recommendations.

Work Pulse™

Detects changes in the person, the environment, and the interaction.

Work Pulse™

Purpose

Monitor how an individual's work experience evolves over time.

Captures

Engagement, motivation, confidence, workload, priorities, and workplace experience.

Contributes

Temporal signals that keep the Understanding™ current and identify meaningful shifts.

Key questions

Has the person changed?

Has the environment changed?

Has the relationship between the two changed?

CompanyLens™

Company research becomes environmental understanding.

CompanyLens™

Purpose

Understand the realities of a company's work environment.

Captures

Organizational culture, operating model, pace, leadership characteristics, expectations, and environment signals.

Contributes

Environmental intelligence used to evaluate fit and improve decision quality.

Key shift

Not: "Is this a great company?"

Instead: "Would someone like you likely thrive here?"

This matters because people may choose companies based on brand, reputation, compensation, or prestige without understanding the environment they are entering.

ManagerMatch™

Leadership compatibility as a core part of work environment fit.

ManagerMatch™

Purpose

Understand compatibility between an individual's work preferences and a manager's leadership approach.

Captures

Leadership style, communication preferences, coaching approach, autonomy, decision-making, accountability, and feedback expectations.

Contributes

Leadership compatibility signals that strengthen Solverah's understanding of workplace fit.

Why it matters

The same company can feel very different depending on the manager. ManagerMatch helps identify whether a person is likely to thrive under a particular leadership approach.

Understanding™

A continuously evolving understanding, not a static user profile.

Stores

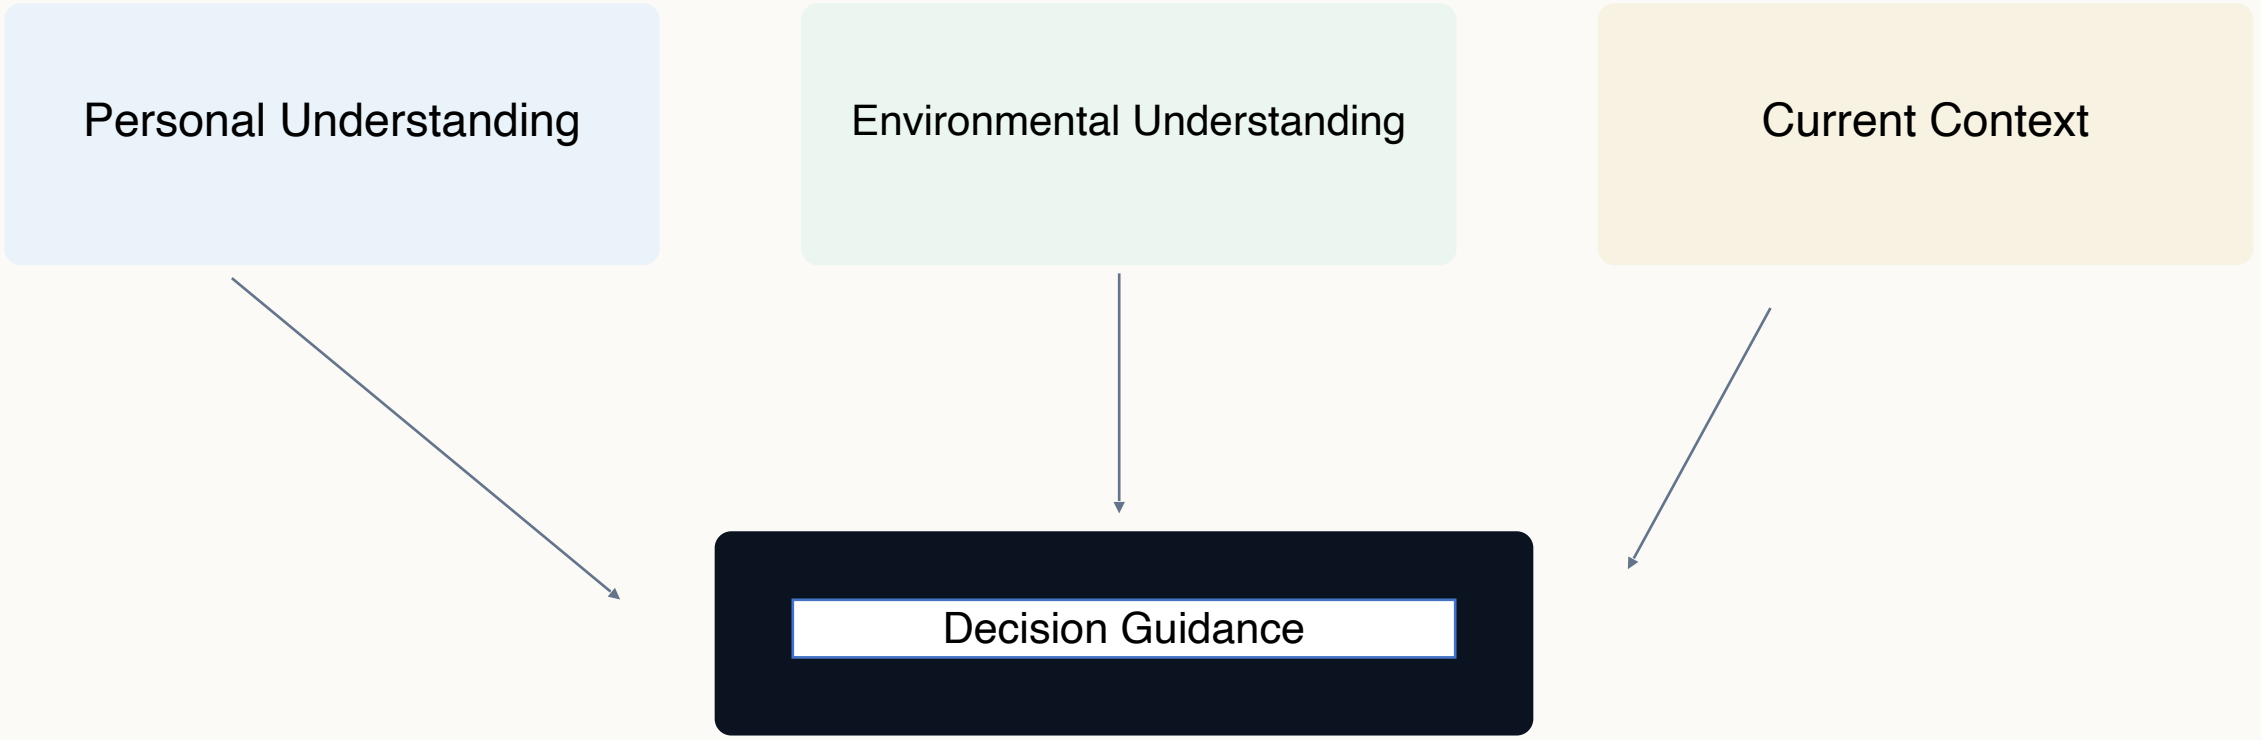

- Motivators
- Values
- Work style
- Career aspirations
- Environmental preferences
- Manager preferences
- Growth patterns
- Decision history

Platform Memory

Every experience becomes more useful because the platform preserves and refines understanding over time.

Decision Intelligence

Where understanding turns into guidance.

Output is not a simple yes/no. It is contextual guidance that explains tradeoffs, fit, and next steps.

Example Journey

Aspirational company interest becomes a fit conversation.

"I think I want to work for Apple."

Solverah does not answer "yes" or "no." It explains how that environment may align—or conflict—with how the individual naturally works.

Technical Principles

Architecture should support the philosophy.

- Modular architecture
- Signal-based reasoning
- Explainable outputs
- Continuously evolving profile
- API-first design
- Product extensibility
- Privacy and trust by design
- No premature scoring

Future capabilities should reuse the same understanding engine.

Solverah helps people make better career decisions by understanding themselves, their environments, and the interaction between the two.
